Domestic Manual Rollers

Certikin offer a wide range of domestic reel systems which enable pool covers to be removed and applied quickly and easily.

DOMESTIC ROLLERS

Eco Reel System

The Eco-Reel range offers exceptional value for money by combining good looking, high quality mirror-polished stainless steel end supports with a sturdy aluminium telescopic tube system – features you would usually find on a premium reel.

Available in three styles, mobile, floor fixed and wall fixed, the Eco-Reel can be used for pool covers ranging from 2.6m to 6.1m in width and up to 12m in length.

Each system includes a crank handle, a slide-lock anti-unwind device and a fully adjustable cover-to-roller strap kit as standard. The winding crank can be positioned on either end of the reel.

These light-weight (up to only 19kg) systems are kept simple in terms of operational requirements, but use high quality materials to maximum effect creating a great looking, great performance roller at an exceptional price.

Rocky Roller System

One of the best-selling pool rollers in the world, the Rocky Roller is the only domestic roller which comes with a full 10 year manufacturer's guarantee – as testament to its strength and durability.

Simple and effective end supports are made from high strength die cast aluminium with a baked enamel finish making them super tough and resistant to UV attack and extreme temperatures. A three piece telescopic satin lustre aluminium tube and versatile cover-to-roller strap connection kit complete this high quality system.

Suitable for covers of up to 45' in length and 20' in width, the Rocky can be deck fixed (fixings not included) or can be mobile courtesy of the heavy duty 2" castors and sprung anchor included with every system.

Easy to assemble and easy to use – the minimal moving parts keep the Rocky problem free and smooth running.

Monaco Premier Geared Reel

The ultimate domestic roller. British made from high quality materials and packed with high quality features.

The rigid telescopic anodised aluminium tubing includes a locking brace and an anti-unwind device. The support brackets are mirror-polished stainless steel and incorporate bearings within the yoke to generate free and easy movement of the reel.

A luxury winding handle and integrated 3:1 innovative geared system make operation even easier, especially useful for larger covers (up to 12m x 6m). High quality accessories such as smooth running heavy duty castors and an easy use anchor bolt system complement this premium product perfectly. The best on the market.
